Career Objective

Motivated and detail-oriented final-year BTech student seeking an entry-level position to apply technical knowledge, problem-solving skills, and teamwork abilities in a growth-oriented organization while continuously learning and contributing to organizational success.

Internships & Work Experience

JobPrep

Cloud Computing(AWS)

ServiceNow Virtual Internship

IT service management (ITSM), workflow automation, and platform-based application development

RVNS Solutions

Python with Machine Learning intern

Academic Qualification

2023 – Present
9.06 CGPA

Bachelor of Technology in Computer Science and Engineering(Artificial Intelligence)
Annmacharya Institute of Technology and sciences

2021 – 2023
9.63 GPA

Intermediate
Sri Venkateswara Jr College

2020 – 2021
9.8 GPA

SSC
ZPHS Peddamanthur

Technical Skills

Programming Languages

Java, C, Python, HTML, MYSQL

Core Areas

DSA, Problem Solving, OOPS
Concepts

Tools/Platforms

GitHub, Leet Code

Advanced Skills

AI&ML, Data Analysis, NLP

Projects

AI-Driven Crop Planning and Resource Optimization System Using Dynamic Programming

Developed an intelligent decision support system that recommends the optimal combination of crops based on land availability, water resources, budget, soil conditions, and seasonal factors. The system utilize dynamic programming to maximize expected profit while efficiently managing available agricultural resources.

Disk Cleanup Recommender (AI Agent Project)

Built an AI-based disk cleanup tool that scans local folders to identify large and old files and suggests which files can be safely deleted. An LLM is used to classify files as safe-to-delete or keep, and a human approval step (via Discord) is added before deletion. After approval, the system deletes selected files and generates a report showing recovered storage space.
